

Haoran SUN

Education

- Sep. 2019–Present **B.Sc.**, Bioinformacis, Chinese University of Hong Kong, Shenzhen (CUHK-Shenzhen).
GPA, cumulative 3.716/4.000 **rank** 1/39
GPA, major 3.831/4.000 **rank** 1/39
- June 2022–Aug. 2022 **Summer visiting program**, University of California, Berkeley (UCB).
Courses taken: MATH104 introduction to real analysis, MATH128A numerical analysis, CS61C machine structure
GPA 4.000/4.000

Skills

- Coding langs Python, Fortran, C, CUDA C++ and CUDA Fortran (elementary), MATLAB, \LaTeX
- Computer skills Linux (including system configuration, multi-user management, software compilation and installation), WSL, Git
- Programming tools Vim, VSCode, Jupyter Lab, Windows Terminal
- Scientific softs Amber, Gromacs, Q-Chem, Gaussian, VMD, Autodock Tools

Teaching Experiences

- Sep. 2021–Dec. 2021 **Undergraduate student teaching fellow**, computational biology, CUHK-Shenzhen.
- Create a slide about how to simplify the Schrödinger equation of hydrogen atom using atomic units
 - Tutorial sessions: molecular docking tool Autodock-Vina; review basic principles of quantum mechanics and quantum chemistry; mathematical background and hands-on Python implementation of principal component decomposition (PCA) algorithm ↗
 - Hold office hours, homework grading, exam invigilation
- Jan. 2022–May 2022 **Undergraduate student teaching fellow**, organic chemistry, CUHK-Shenzhen.
- Tutorial sessions: basic concepts and exercises of stereochemistry; detailed mechanism of keto-enol tautomerism, aldol reaction, and Claisen condensation reaction, related exercises
 - Hold office hours, homework grading, exam invigilation

Achievements and Honors

- Sep. 2018 **The First prize**, Chinese Chemistry Olympiad.
- Sep. 2019–June 2023 **Bowen Scholarship**, 30,000 RMB/year, in total 120,000 RMB, CUHK-Shenzhen.
- Sep. 2020 **Dean's List Award**, School of Science and Engineering, CUHK-Shenzhen.
- Sep. 2021 **Dean's List Award**, School of Life and Health Sciences, CUHK-Shenzhen.
- Sep. 2022 **Dean's List Award**, School of Life and Health Sciences, CUHK-Shenzhen.
- Sep. 2021 **The Second prize**, Contemporary Undergraduate Mathematical Contest in Modeling, provincial level.

Research Experiences

- Apr. 2021–Present **Research assistant**, Hajime Hirao's group, CUHK-Shenzhen.

- Apr. 2021–June 2021 **Training:** theoretical studying of quantum chemistry by *Modern Quantum Chemistry*
- SCF algorithm coding by Fortran, including RHF 6-31G H₂ molecule and UHF 6-31G H₂⁺ molecule
 - Fixed problematic DIIS algorithm in original group Fortran code which used for acceleration
- Aug. 2021–Dec. 2021 **Project:** reaction pathway analysis–P450 C-S bond formation by TleB (PDB ID: 6J83)
- Build truncated model to perform DFT calculations along the proposed reaction pathway to identify electronic configurations under different spin states
 - Molecular dynamics simulation of initial reaction complex to determine the starting path of the reaction
 - Deriving MM parameters, setup system, perform MD simulations, check non-bonding interactions, check clusters in trajectory by statistical algorithms, found minor sub-states by clustering algorithm
 - MMPBSA free energy approximation to compare population between states, in order to find which binding pose is more favorable for protein
 - Using quantum mechanics + molecular mechanics (QM/MM) hybrid method to investigate into the protein-substrate interaction
 - Determine QM region of the system, use MM parameters to build up QM/MM model
 - Use small basis set when performing optimization, then use large basis set and electronic embedding scheme to investigate electronic configurations and effect of protein
- Apr. 2022–Present **Project:** energy decomposition analysis (EDA) and natural bonding orbital (NBO) analysis of the nature of protein-drug interaction at the heme iron center in cytochrome P450 inhibition
- Write an example Lewis configuration for NBO input
 - Performed batch EDA analysis using Q-Chem, fix convergence problem by shutdown DIIS when error is small
 - The research could provide insight into inhibition drug design for P450
 - Under review
- Jan. 2020–Dec. 2020 **Research assistant,** Hsien-da Huang's group, CUHK-Shenzhen.
- Project:** effects of traditional Chinese medicine in gene regulation: identify DEGs using statistical methods
- Visualization of gene expression profile using PCA and t-SNE to get a first sight of data's distribution
 - Group tutorial about how to use Connectivity Map
 - Exploring databases, submitting a query, interpreting statistics and heatmap
 - Gene set enrichment analysis (GSEA) for traditional Chinese medicines perturbed gene expression profile to identify differentially expressed gene sets

Language Skills

Chinese: native

English: TOEFL 107/120, with reading 30, listening 29, speaking 23, writing 25

Japanese: elementary, only able to read
